Last Updated: Nov 6, 2026

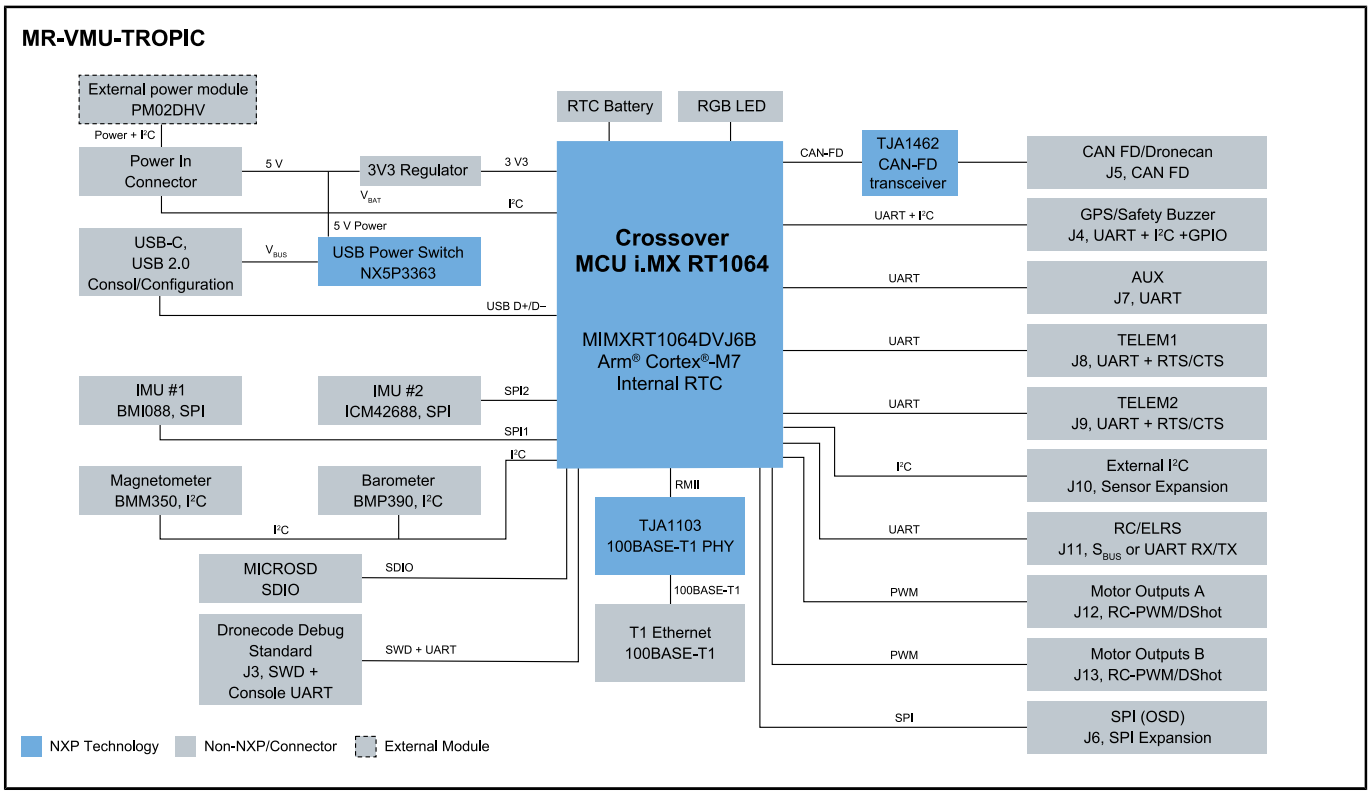

Tropic VMU/FMU is a compact and deterministic flight management unit (FMU) reference design built for reliable real-time flight control in drones and autonomous systems.

Combining a highly integrated architecture with an open software ecosystem, it helps developers reduce SWaP, simplify system integration, and accelerate development.

Designed for predictable low-latency operation, the platform enables robust flight performance while supporting modern networking and connectivity requirements.

Tropic VMU/FMU provides a flexible foundation for next-generation autonomous platforms, from commercial drones to mission-critical aerial systems.
