The RDGD31303PHG2EVB is a three-phase inverter evaluation board (EVB) featuring GD3130 gate drivers and designed for use with HybridPACK™ G2 silicon carbide (SiC) power modules. It supports the development, validation and evaluation of three-phase inverter systems for automotive and industrial power conversion applications. The EVB provides a platform for assessing GD3130 gate-driver performance, inverter control and SiC power module integration in high-voltage designs.
