

Passive Optical Networking

# MSC7120 GPON:

# Integrated GPON ONT System-on-Chip

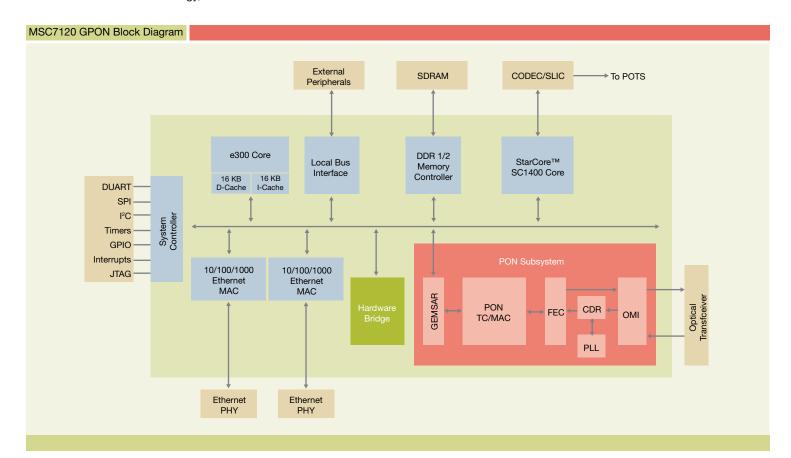

#### Overview

The MSC7120 GPON is a system-on-chip (SoC) solution for broadband passive optical network termination (ONT) applications. It integrates a GPON TC/MAC, StarCore™ DSP, Gigabit Ethernet TC/MACs and a clock and data recovery (CDR) unit to a core built on Power Architecture™ technology.

The MSC7120 GPON provides a highly integrated solution designed to minimize ONT costs through silicon integration and a reduction of external components. The MSC7120 GPON SoC device is based on Freescale's e300 processor platform built on Power Architecture technology, which

provides the foundation for the company's PowerQUICC™ II Pro communications processor family. The MSC7120 GPON device's e300 core operates at 266 MHz and includes a 16 KB instruction cache and a 16 KB data cache. The SoC integrates a DDR 1/2 memory controller, a PowerQUICC II-compatible local bus controller (LBIU), two 10/100/1000 Ethernet controllers, a dual universal asynchronous receiver/transmitter (DUART), I2C, a serial peripheral interface (SPI), an interrupt controller and parallel general-purpose input/outputs (GPIOs). In addition, the SoC integrates an SC1400 DSP based on StarCore technology for enabling voice functions.

The PON subsystem is based on a GPON layer termination device as specified in ITU-T G.984. The PON subsystem integrates the TC/MAC function as well as the clock and data recovery (CDR) function; it further supports Advanced Encryption Standard (AES), Forward Error Correction (FEC) and dynamic bandwidth reporting per the FSAN requirements. A hardware bridge ensures that a high-throughput data path is available with minimum intervention required by the e300 core. Further, the PON subsystem leverages Freescale's leadership in B-PON products and mixed-signal technology.

# MSC7120 GPON Features

#### PON Subsystem

- Integrated CDR
- Support for GPON mode per ITU-T G.984.1, 984.2, 984.3 and 984.4 standards
- Down/upstream rate: up to 2.4 Gbps/1.2 Gbps
- · Upstream traffic scheduler
- · Support for up to 38 allocation IDs and 39 port IDs
- 64-entry IP group address filter for in-line video distribution support

# Hardware Bridge

- Filters and forwards packets between the e300, StarCore DSP and two GbE TC/MACs with no processor overhead
- · Video packets switched in hardware with no processor overhead

#### e300 Power Architecture Core Processor

- 32-bit, high-performance, superscalar processor core
- 511 Dhrystone 2.1 MIPS at 266 MHz (1.92 DMIPS/MHz) with 16 KB I/D-caches
- · Load/store, system register and branch processor units and two integer units
- Dynamic power management

# StarCore SC1400 Core

- · Supports up to four voice channels with up to two three-way calls on a single TDM
- 712 DSP MMACS
- 178 MHz core
- 128K/8K M1/M2 memory

# **DDR/DDR2 Memory Controller**

- 32-bit data interface, up to 266 MHz data rate
- Page mode support for up to four simultaneous open pages

# Dual 10/100/1000 Ethernet TC/MAC Controllers

- Two 10/100/10000 Ethernet interfaces with GMII, RGMII, MII and FIFO8 physical interfaces
- Each TC/MAC supports eight priority transmit/receive rings; transmit scheduler/ receive filer
- L2, L3 and L4 filing; VLAN tag insertion and extraction

#### Local Bus Controller

- · 26-bit address bus and 16-bit/8-bit data bus and data operating up to 66 MHz
- 16- and 8-bit port sizes controlled by on-chip memory controller

# Peripherals, Miscellaneous I/Os

- DUART
- I2C and SPI interfaces
- TDM port available for DSP functions
- · JTAG test access port
- Up to 48 parallel general-purpose I/Os (GPIOs)

# Technology

- 90 nm, 1.0V core and 1.8/2.5V I/O
- 456 TEPBGAII, 35 mm x 35 mm, 1.27 mm pitch

# Software and Systems **Enablement Support**

# StarCore SC1400 Core Software and Support

- Licensable software and maintenance support available
- Voice coders: G.711, G.726, G.729
- Echo cancellation: G.165/G.168
- Voice-over-IP (VoIP)
- Fax
- · Jitter buffer management
- · Generic tone detection, CallerID

# e300 Power Architecture Software and Support

- Linux® operating system, standard TCP/IP stack ported
- Drivers for bridge, LAN and PON

# Systems Enablement

• Reference design kit, debug environment
